To whom it may concern,

We hereby confirm that the Stonex X300 – “The Smartest Scanner in the World” has come off as the 3rd best product in the competition for the Wichmann Innovations Award. The prestigious award given for “The Most Innovative Product” at the Intergeo 2013 was judged by a five-member jury.

For the second time, German Wichmann Verlag publishing company awarded the “Most Innovative product” or the “Most Innovative Application” for the Wichmann Innovations Award in a public vote at the Intergeo 2013 trade show. In both the public vote at the Intergeo trade show and via internet voting, the Stonex X300 has been awarded the 3rd prize in the “Most Innovative Product” category.

The company STONEX Positioning is a European manufacturer of high-quality survey equipment and laser scanners based in Italy. The X300 was developed by a small team of Italian engineers and worked up to series production. The new control and operation of the X300 is possible by internal user interface. For this purpose, no special hardware or software is needed. It is controlled via an independent browser (iOS, Android, or Windows).
